Risk Matrix

Likelihood	Very Likely Likely Possible Unlikely Very Unlikely	Impact				
		Trivial	Minor	Moderate	Major	Extreme
		Medium	Medium	High	High	High
		Medium	Medium	Medium	High	High
		Low	Medium	Medium	Medium	High
		Low	Low	Medium	Medium	Medium
		Low	Low	Low	Medium	Medium

Severity of Vulnerabilities

The styling for this basic card example is created by using default Bootstrap utility classes. By using utility classes, the style of the card component can be easily modified with no need for any custom CSS!

Target

The styling for this basic card example is created by using default Bootstrap utility classes. By using utility classes, the style of the card component can be easily modified with no need for any custom CSS!

Description

The styling for this basic card example is created by using default Bootstrap utility classes. By using utility classes, the style of the card component can be easily modified with no need for any custom CSS!

Vulnerability

Summary

- Name xss
- Severity High
- Status Open
- Exploitability Open
- OWASP Top 10 Mapping Injection

Risk/Impact

The styling for this basic card example is created by using default Bootstrap utility classes. By using utility classes, the style of the card component can be easily modified with no need for any custom CSS!

Description

The styling for this basic card example is created by using default Bootstrap utility classes. By using utility classes, the style of the card component can be easily modified with no need for any custom CSS!

POC

The styling for this basic card example is created by using default Bootstrap utility classes. By using utility classes, the style of the card component can be easily modified with no need for any custom CSS!

Remediation

The styling for this basic card example is created by using default Bootstrap utility classes. By using utility classes, the style of the card component can be easily modified with no need for any custom CSS!

Comments

The styling for this basic card example is created by using default Bootstrap utility classes. By using utility classes, the style of the card component can be easily modified with no need for any custom CSS!

References
